## DETAILED ACTION

### *Specification*

The disclosure is objected to because of the following informalities:

- Subheadings are missing throughout the disclosure

Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Doorn et al. (US Patent 5,942,848).

Re claim 1: Van Doorn et al. discloses, in figure 1 and throughout the entire specification, a color display device comprising a substrate (3), having in the substrate a phosphor pattern of phosphor regions containing phosphors for emitting, in operation, red, blue and green light through a display window (25R, 25G, 25B), with at least a blue color filter (24B) layer extending between the blue phosphor and the substrate, characterized in that the blue phosphors comprises phosphor particles provided with blue pigments (column 3, lines 65+).

Art Unit: 2882

Re claim 2: Van Doorn et al. discloses, in column 4, lines 65+, the thickness of the blue color-filter layer to be in the range of 1.5-2.5 micrometers. This range includes the thickness less than 2 micrometers.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following prior art discloses a color display device comprising a substrate (3), having in the substrate a phosphor pattern of phosphor regions containing phosphors for emitting, in operation, red, blue and green light through a display window, with at least a blue color filter layer extending between the blue phosphor and the substrate, characterized in that the blue phosphors comprises phosphor particles provided with blue pigments, but fails to disclose the thickness of the blue filter less than 2 micrometers:
